

## Function

- The MyBio Tracer transmits a series of **discrete frequencies to the body**
- The body relates these frequencies to the pathogen's genetic structure
- If active, the compromised cells and the body reacts **holistically and immediate**
- This reaction is large enough to be **electrically measured** by the MyBio Tracer
- The unit calculates the genetic structure (using mathematical formulas)
- This genetic structure is **compared to a database of 7000** odd pathogens and subspecies, hosted in a cloud server
- The pathogens that **compare accurately** will be available on request
- Store data for pathogen identification through a **powerful remote data server**
- **Log data** for future reference

## Resonance Therapy SA

Resonance Therapy SA is a South African based company in business since 2010.

We specialize in frequency technology and pulsed electromagnetic field (PEMF) therapy products, developed and manufactured exclusively in South Africa. Our products are scientifically sound, of good quality and supported by ongoing research.

We pride ourselves in excellent customer service and after sales technical support.

We believe in the body's potential to heal itself and that PEMF therapy strengthens this ability.

We are the sole distributors of the MyBio Pulser and MyBio Tracer (Electronic Pathogen Detector).

# MyBio Tracer

## Electronic Pathogen Detection

Each pathogen in existence has associated frequencies related to its structural properties. By applying a series of pathogen-related frequencies to the body while measuring the body's immediate reaction, it can be determined if the body has a current sensitivity to a specific pathogen (virus, bacteria, fungus, and parasite) indicating its presence in the body.

This is possible as the body is continuously identifying and destroying pathogens by building intricate molecular systems to improve immunity. These identifying mechanisms are complex and include the identification of pathogens by frequency.

# How the MyBio Tracer works

### 1. SCAN

By applying controlled electromagnetic pulses and using specialized detection methods, it is able to detect minute signals from the body which reacts holistically on these impulses.

- Determine the body's reaction to frequency
- Depicts the reaction on a graphical interface
- Log data for future reference

### 2. ANALYZE

This function is used to identify pathogen markers in the body by mathematically combining the body's reaction with extensive pathogen databases derived from worldwide research institutions.

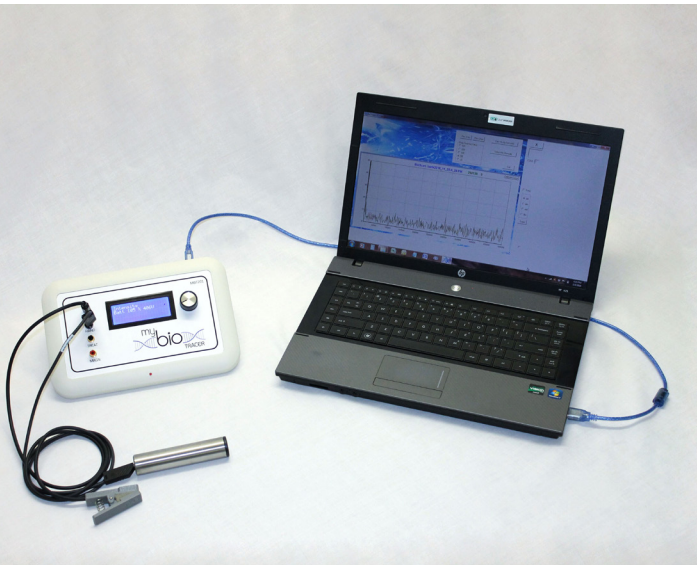

- Determine the treatment frequencies.
- Store data for pathogen identification through a powerful remote data server

### 3. TREAT

A complex electrical pulse generation tool that delivers healing frequencies via a pulsed electromagnetic field. This can be applied in a variety of waveforms for maximum effectiveness to penetrate the body's cells.

- Full MyBio Pulser function
- Treatment via self-adhesive electrodes and treatment mat
- Custom made magnetic coils on request

# Advantages of the MyBio Tracer

Assisting medical and natural health practitioners to reach a diagnosis which is verifiable with conventional pathology tests

Reduces or even eliminates the indiscriminate use of antibiotics, and assists medical practitioners in prescribing effective medication

Pathogens present in the body are identified before it can escalate to an actual or full-blown disease

Non-invasive and easy to use while it supports the body's innate ability to heal itself
