For Business Partner, Hurom HW

STRONGER & EASIER TO USE THAN EVER

UPGRADED - Durability, Functionality and Hygiene

**The most optimal rotation speed -
60rpm of Squeezing Screw, 25rpm of Spinning Brush**

Premium Stainless Steel
Strong resistance to external shock
More durability & Hygiene

The hopper is designed for
optimized stability and safety
for users

A set of the Fine Strainer for juice
and the Coarse Strainer for smoothie,
to be used according to preference

A model designed for commercial use with a
spinning brush that increases the amount of
extracted juice and is easy to clean

Easy to clean and smoothly discharges
residue inside the chamber, so it can extract
juice from a larger amount of ingredients for
longer use

The juice cap helps to mix
of ingredients within the
chamber, as well as aid in
easy-cleaning after juicing

A side button designed to be
easily reached by users in a
commercial setting

Using the built-in LED display,
easily and intuitively distinguish
the status with flickering and
different colored LED.

A stronger and bigger motor
that is still quiet

Design Award world-famous
iF & Reddot Design Award
Add beauty to your kitchen!

At 60 revolutions per minute,

With an optimal rotation speed of 60 RPM, it can extract a large amount of ingredients

At 60rpm, keeps nutrients intact with Hurom's slow squeezing technology.
100% Real Juice, Hurom Juice.

Timeless value Premium metal

Stainless Steel

The highest quality stainless steel is used in the HWS model body and can be found in the most hygienic kitchens. Since stainless steel does not rust, it is harmless to the human body and has excellent durability and chemical resistance. Thus, the design meets the requirements of longer and more frequent product usage for businesses.

1000ml Chamber

A large amount of ingredients can be used to extract juice at once. When customers order a large quantity of the same menu item, it does not require you to empty the juice repeatedly in a short period of time to improve your productivity.

Bigger squeezing screw & strainer plus optimized structure

The size and binding method of the screw and strainer on the HW model were optimized for commercial use

Juice can be steadily extracted for a long time and from a large amount of ingredients. More convenient to wash and better efficiency to work with since it's easy to insert ingredients and smoothly discharges them without leaving any residue in the screw and strainer.

Semi-Transparent Hopper

Watch your ingredients from start to finish. Not only does the translucent hopper allow us to visually check whether ingredients are getting stuck or being processed smoothly, but also adds a fun element when juicing together with children.

Convenient Juice Cap

The juice cap helps to mix of ingredients within the chamber, as well as aid in easy-cleaning after juicing

Hang-able pusher only for HW model

The pusher is attachable for hygiene and convenience when being used frequently. When you extract juice, attach the pusher and hang it on the hopper.

Exclusive Squeezer for HW

Effortlessly extract juice from citrus fruits and make a variety of beverages with the Hurom Squeezer (such as lemonade).

The buttons and outlet were perfectly positioned, considering the convenience of users working at a store.

Hurom Professional

Caring about user experience with our many years of expertise at the Hurom Juice Cafe

2015 iF Design Award
2015 reddot Design Award

A balanced design with separate chamber and control/display (left and right)

A combination of solid stainless steel, luxurious material and innovative design

HUROM

SPEC

Chamber type	Lever type
Cap	Cap type
Chamber size	1000ml
Rpm	60rpm
Materials	Chamber : Tritan / Body: Stainless steel
Product Size	W 200mm / L 282mm / H 460mm
Weight	9 kg

Free harmful substances BPA Free, HUROM

PEI [Ultem] Ultem Squeezing auger

Premium material which is 6 times stronger than regular PP Plastics

Ultem + Stainless used Strainer

Strong Stainless & Durable and Free harmful substances Ultem

POM Brush Holder, Silicone Brush

Excellent resistance against high-temperature & friction coefficient

Tritan Chamber

BPA Free Material Commonly used for "Baby Bottles"

****ULTEM (Polyetherimide)**
Strong and Durable Material used in NASA for Spaceships
