### Description

The Hubble Cloudlink connects to the Hubble BMS battery through the BMS RS232 port, which enables the device to integrate directly with our BMS and report all statistics and alarms to the cloud for remote monitoring of both the batteries and select inverters.

?

Additionally the Hubble Cloudlink has its own CAN Bus protocol. This protocol encapsulates 5 different CAN Bus protocols. When you connect the Cloudlink device to a CAN Bus enabled Inverter, the Hubble Cloudlink will automatically detect the correct CAN Bus protocol to use through it's A.I. (Artificial Intelligence) technology and then enable the best protocol for your inverter.?
