Description

The Solenco CF8608 Air Purifier system with its innovative Swiss design is the number one rated CADR Air Purifier in China based on similar product size.

The offers extremely high air filtration efficiency capturing airborne particles including allergens, pollen, dust, smoke and pet dander.

This is done by means of an advance multi-stage cleaning system:

- Pre-filter (removes the large airborne particles)
- H13 HEPA filter - Medical Grade Filter (removes particles from the air as small as 0.1 microns – smaller than the eye can see)
- Carbon filter (removes smells and odours)
- UVC light kills viruses and bacteria
- Photocatalytic Oxidation (PCO) is a very powerful air purification technology and has the ability to destroy particles as small as 0.001 microns

With its ability to capture and destroy bacteria and viruses the Solenco CF8608 Air Purifier results in a 99% reduction in E.coli, P. Cintrinum and A. Niger. This unit therefore comes highly recommended to protect public facilities, doctor's rooms and hospital rooms for patients. It further reduces VOCs, toxic fumes and foul odours.

Unlike many portable air purifiers, the Solenco CF8608 Air Purifier is extremely quiet (less than 29dB on low speed and less than 49dB on high speed) and can treat the air of spaces of up to 80m².

The Solenco CF8608 Air Purifier comes with a remote control and features feather-touch controls that enable you to quickly and easily change the settings as you run your fingers over the panel.

This air purifier boasts a dust sensor to indicate the indoor air quality and by means of an auto-function further automatically adjusts the fan speed accordingly.

The enhanced charcoal and HEPA filters on the Solenco CF8608 have a rubber gasket seal to ensure that no air leaves the air purifier uncleaned.

H13 Hepa Filter Air Purifier

The Solenco CF8608 comes standard with an H13 HEPA Filter. This classification grades this air purifier within a medical grade quality.

Common standards require that a HEPA air filter must remove, from the air that passes through it, at least 99.95% (European Standard) or 99.97% (ASME, U.S. DOE) of particles whose diameter is equal to 0.3 μ m. Hepa filters are graded on their levels of efficiency with the higher the grade the higher the efficiency.

True HEPA generally ranges from H10-H12.

HEPA H13-H14 are within the highest tier of HEPA and are considered medical grade quality. Whereas H10-H12 filters only trap 85-99.5% of all particles that are 0.1 microns in diameter, HEPA H13 and H14 trap 99.95% and 99.995% of such particles, respectively.

Key Features:

- H13 HEPA Filter
- Innovative Swiss design
- Feather-touch controls
- Energy-efficient (only 70 watts)
- Multi-stage purification system
- 99% reduction in E.coli, P. Cintrinum & A. Niger
- Remote control for better use
- Dust sensor to indicate the indoor air quality
- Auto function to adjust the fan speed according to the air quality
- 4 speed settings
- Timer with 3 settings (2hr, 4hr and 8hr)
